MEI

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

or HT

Title of Invention: New Biocompatible Polymer Systems Carrying Trifusal
 Inventors (please provide full names): Ruiz, Alberto; Rodríguez Crespo, Gema;
San Roman del Barrio, Julio
 Earliest Priority Filing Date: 09/03/1999

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Metabolite of
trifusal

HTB-4-trifluoromethylsalicylic acid
328-90-5

A polymeric compound of the formula:

A = a polymerisable acrylic or vinylic monomer carrying trifusal or HTB, wherein trifusal or HTB are linked to the remainder of the monomer molecule through an in vivo hydrolysable covalent bond;

B = a second polymerisable monomer
 m and n = molar fractions of the monomers A and B in the polymer so that $m+n=1$, $m \neq 0$.

A & B units are randomly distributed in the polymer.
